Version 3.5 Released

We are proud to announce the release of the SchoolSoft Conference Manager 3.5. This release adds new features, improved functionality and makes the Conference Manager more robust, sophisticated but easier to configure and use than ever.

These features and enhancements include:

- a new Conference Wizard approach to configuring conference rounds easier than ever
- the Conference Manager System Administrator can now set:
    - whether teachers can schedule break time blocks within each session
    - whether parents are able to leave advance comments and/or questions for the teacher when they book their interviews
    - the maximum number of bookings any one parent can make for a child with a specific teacher
- the System Administrator can preview exactly what the parent site will appear when it is open. This provides verification the configuration is correct.
- if a teacher account is added to a school's Conference Manager after a conference round begins the system will now prompt the System Admin to determine if the teacher should be added to the current round already in progress
- System Administrator and Office Staff level users can now export the parent list and emails to an excel spreadsheet
- The system is more robust and reliable than ever!
